

# Data Management CONVERGE

## Any Data.Anytime.Anywhere.

TES's Data Management Software - CONVERGE - is a future-ready platform designed to support every stage of your environmental monitoring program—from initial setup to daily operations and long-term maintenance. Developed by a team with decades of experience in environmental and process data systems, the platform delivers advanced, flexible, and user-friendly functionality—tailored to meet today's requirements and tomorrow's challenges.

Instrument and Data Logger Agnostic, the system integrates seamlessly with a wide range of devices and networks, giving you the freedom to adapt, scale, and innovate—without being locked into a single ecosystem.

Access live and historical data, run diagnostics, receive smart alerts, and generate automated reports—all from a secure, centralised portal.

With full remote access, you can reduce downtime, minimise site visits, and lower operational costs. Whether you're monitoring dust, air quality, weather, noise, vibration, or water quality, the DMP platform gives you complete visibility and control—delivering defensible data you can trust, whenever and wherever you need it.

This is more than just a monitoring tool—it's a smarter way to manage any data, anytime, anywhere.
